Instant Surface Testing for Drugs of Abuse

Drug Detection Solutions, LLC, is a company developing a non-invasive surface testing product, the Locator Rx5™. This disruptive technology tests surfaces such as desks, suitcases or keyboards as opposed to biological samples such as urine or blood. The product can be used to identify areas where drugs have been conveyed, manufactured or abused. The core technology has been successfully field tested in Afghanistan to note contamination of surfaces in areas where opium is smoked or handled. The Company plans to develop future applications of this platform technology to other areas, such as surface testing for explosives, biological weapons, food toxins or other substances.

## Technology

The Locator Rx5™ is a self-contained platform into which a sample is collected and instantly tested. The operator would simply remove the cap and wipe a surface with a specially treated swab built into the device. The materials on the swab are released into a solution which is then tested for the presence of drugs of abuse using an embedded specialty designed lateral flow detection strip. The initial product, Locator Rx5™, will instantly detect cocaine, methamphetamine, ecstasy, opiates and marijuana within three minutes. The product represents an improvement over prior products because it can test wet, dirty and greasy surfaces that will foul current tests. In addition, the product is expandable, allowing it to test 10 or more substances at a time, giving it greater flexibility to address a wide range of markets. The device also has a tamper proof seal so the collected sample can be shipped to a lab for confirmatory analysis.

## Market Potential

The market for all drug testing related services in the United States is currently estimated to be \$2.5-\$3 billion and growing. Approximately 75% of all drug testing is currently being done using urine samples. However, existing urine testing technologies are easily compromised with products that are routinely available which negate positive urine drug tests. It is estimated that as much as 15% of all urine drug tests are adulterated.

Because surface drug testing is non-invasive and does not require consent, potential applications are estimated to generate more than \$500 million within five years. Initial launch of the product will be to the Federal Government, Border Control, the Drug Enforcement Agency and the Department of Homeland Security. This would be followed by law enforcement, property management, consumers, schools and workplace.

## Strategy

Marketing will be done by the founders, employees, and outside consultants as the founders have key decision making contacts in these areas and the initial response has been encouraging. With national and international clients already being prepared to receive the initial shipments, large government contracts will be the primary targets with long-term roll outs to retail, schools and other markets.

## Management Team

### David Martin, Ph.D. - President & Chief Executive Officer

Over the past 30 years, David Martin has not only designed research and clinical laboratory studies, but has successfully transferred and commercialized research technologies. He is the co-inventor of the Locator Rx5™. He has built several research and clinical laboratories, including one of the first Department of Health and Human Services certified drug testing laboratories to test mandated federal employees. He also was a member of the International Olympic Committee's Medical Commission, special working group to harmonize sports drug testing worldwide. He served as the Anti-Doping Administrator for the International Tennis Federation and conducted the first ever drug testing at Wimbledon and other Grand Slams. He is currently treasurer, serves on the Executive Committee and Board of Directors of the Drug and Alcohol Testing Industry Association and has authored and co-authored over one hundred articles, abstracts, presentations and book chapters on drug testing. He has served as the CEO and/or co-founder of five profitable businesses including one that was publicly traded. He has also coordinated mergers and acquisitions and consulted with professional sports, academic and Fortune 500 organizations nationally and internationally.

### John J. Holmgren, MBA - Chairman of the Board

Mr. Holmgren has served as a Portfolio Manager with Security Pacific Bank Trust Department, a Security Analyst with J. Barth & Co., the Partner in Charge of Institutional Department of Crowell Weedon, the President and Chief Executive Officer of Decision Services Inc. and the Founder and Executive Chairman of DSI International Management, Inc. which was acquired by UBS. After retiring from UBS, he became an early-stage investor in a number of start-ups and is currently Chairman of the Board of Life-Prints Solutions, LLC and Elopement Solutions, LLC.

### Charles A. Bowman, MBA - Vice President and Chief Financial Officer

Mr. Bowman currently serves as a Member of the Board of Managers, Vice President and Chief Financial Officer of the Company, positions which he has held since July 2007. In addition, he serves as the Chief Executive Officer of Life-Prints Solutions, LLC.

### Steven T. Gold, JD, MPH, MBE - Vice President of Business Development

Mr. Gold, co-inventor of the technology, has a vast array of business experience, including private company formation, funding and successful exits. He was a principal investor in multiple private companies, including one that went public and two that were sold to public companies. Gold served in the chambers of Justice Charles Wells of the Florida Supreme Court and worked for then Attorney General, now Governor, Charlie Crist, as a Deputy Solicitor General in the State of Florida.
